FT-1 Combination Fuse Tester/Puller

- * Designed to identify blown fuse in fuse panel or fuse box
- * Fuse tester can be used on different size fuses by sliding the test probe to the appropriate position of the fuse being tested
- * Green LED lights when fuse is good

Fuse Puller Function

Use the Puller to pull out blown fuse

Fuse Tester Function

Use the Tester to identify the blown fuse.
If the green LED lights up, the fuse is good. If the green LED does not light up, the fuse is blown and need to be replaced

Intelligent[®] FUSE

History

Previous generation of automotive blade fuse has no visual identification for blown fuse in the fuse box assembly.

The only method of verifying broken fuse is to manually pull out each fuse or check each circuit one by one to find the blown fuse. Not only is it time consuming, but also not user friendly. Majority of the consumers are not capable of doing the check on the circuits themselves.

Design Idea

The design for INTELLIGENT FUSE is based on the idea of identifying blown fuse in the fuse box assembly immediately by visual inspection. The design calls for a light emitting device to be integrated with the automotive blade fuse. By doing so, the product enables consumers to identify blown fuse visually and replace it without any technician's help.

Lights Up When It's Out!

Patents Awarded

- U.S. Patent: 7,339,486
- Japan Patent: 3125233
- Taiwan Patent: M289229
- China Patent: ZL200820110540.5

Q Have you ever try to find a blown fuse in your car?

Q Wouldn't it be better that the fuse can tell you it needs to be replaced?

Intelligent Fuse is designed purely from user friendly point of view. The patented construction design of Intelligent Fuse is manufactured and tested to meet the strict OEM requirements and SAE standards for automotive fuse. With the built-in LED indicator, a blown fuse can be easily identified and replace with new ones. Intelligent Fuse can replace traditional car fuse without the need of any modification and can provide the same performance (in some cases better performance) as your old fuse.

4 EASY STEPS TO UPGRADE YOUR FUSE

STEP 1

Take out your old fuse (remember the exact spot where the fuse should be put back in) and match your fuse to the following pictures to get the correct model number.

AMP
(Replaces Littelfuse's MAXI fuse & Bussmann MAX fuse)

ATP
(Replaces Littelfuse's ATO fuse & Bussmann ATC fuse)

ASP
(Replaces Littelfuse's MINI fuse & Bussmann ATM fuse)

ASM
(Replaces Littelfuse's Low-Profile MINI fuse & Bussmann ATM-LP fuse)

STEP 2

Identify the ampere rating. Ampere rating is usually marked at the top of the fuse.

STEP 3

Find the fuse you need from the shelf.

STEP 4

Install your newly purchased Intelligent Fuse in the same slot of your old fuse and you are ready to go.
